

# BENEFITS OF SD 25

QUICKLY  
BREAKDOWN  
PLANT RESIDUE  
WITH SD 25

- Break down excess crop residue/stubble
- Convert residue into carbon/rebuild humus levels in soil
- Release tied up nutrients in residue
- Improve nutrient availability
- Improve germination & plant establishment
- Improve soil resilience

## APPLICATION RATE

SD 25 rates determined by APH (corn), existing residue and method of application.

| OUNCES<br>PER ACRE | SD 25          |
|--------------------|----------------|
| 16                 | light residue  |
| 20                 | medium residue |
| 24                 | heavy residue  |

## ACTIVE INGREDIENTS

### CONTAINS NON-PLANT FOOD INGREDIENTS

|   |                    |
|---|--------------------|
| <i>Bacillus licheniformis</i> .....       | 6.0 million CFU/ml |
| <i>Bacillus amyloliquefaciens</i> .....   | 4.0 million CFU/ml |
| <i>Bacillus pumilus</i> .....             | 2.0 million CFU/ml |
| <i>Bacillus subtilis</i> .....            | 2.0 million CFU/ml |
| <i>Streptomyces griseus</i> .....         | 0.2 million CFU/ml |
| 0.06% humic acids derived from leonardite |                    |

FOR USE ON: ROW CROPS, BROADCAST CROPS, PASTURE, LEAFY GREENS, CITRUS, FRUIT, NUT TREES, SEEDS, HEMP AND GREENHOUSE CROPS.

# SD 25 IN THE FIELD

## Corn Stubble Digestion (field corn)

- 100% crop residue decomposed 5 months post application
- Nutrients returned back to the soil
- Soil structure improved

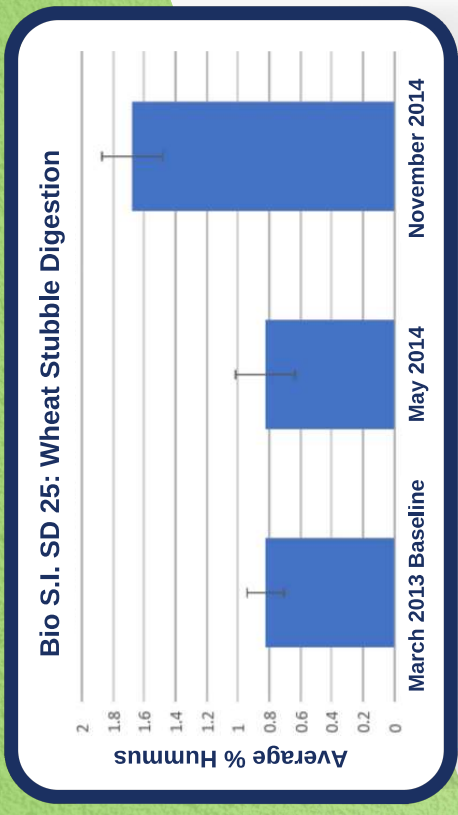

Corn stubble 40 days post SD 25 application.

Wheat stubble 30 days post SD 25 application.

## Wheat Stubble Digestion

- 100% wheat stubble converted into humus
- Reduced risk of nutrient tie-up
